

Provider Partnership Benefits

Pharmacist-led Medication Therapy Management (MTM) Program is designed to support your patients' medication-related needs while also creating an opportunity for your clinic to improve value-based contracts and capture opportunities through billable pharmacist services.

From a clinical standpoint, the MTM program provides comprehensive medication reviews, identification and resolution of medication-related problems, adherence support, and patient education. This is particularly important for patients with multiple chronic conditions, polypharmacy, or high-risk therapies. These services are aimed at improving outcomes, reducing adverse drug reactions, and supporting your providers in delivering high-quality, coordinated care.

This program has been designed to integrate seamlessly into your current workflow, with clear documentation and prompt communication with your providers. The goal is to function as an extension of your care team to improve medication use, support quality goals, and help your practice capture value from pharmacist services that are being underutilized- especially in Florida.
